

ABSTRACT

This final project report is motivated by the facilities in the park, namely tables and chairs that have a role as a means of developing and nurturing culture in a housing complex, but in the field case, the previous table and chair design did not pay attention to several things, such as aspects and orientation of park facilities. The previous facilities had shortcomings, such as not paying attention to several things such as material aspects, and systems as well as orientation such as accessibility, security and safety, and aesthetics, which are very important because they are public facilities and are used by residents of the Kucica VII Housing Complex. So that table and chair facilities are needed which are certainly designed according to existing knowledge, the design of these tables and chairs is expected to be able to provide solutions to previous table and chair facilities and make residents of the Kucica Housing Complex feel safe and comfortable when using new tables and chairs. By using qualitative research methods and User Centered Design (UCD) design methods to obtain primary data and needs in accordance with the preferences of the residents of the Kucica Housing Complex. Using mahogany wood material to increase safety and of course comfort when used, by applying system aspects, namely free standing so as not to increase the risk of reduced material durability due to moving, can also maximize activities while in the garden.

Keywords: *Table and Chairs, Orientation, Aspect*
