

ABSTRACT

This study aims to examine the influence of corporate governance, risk management, and compliance (GRC), and profitability on firm value. The corporate governance variables used in this study are proxied with the audit committee, managerial ownership, institutional ownership, and independent board of commissioners. The population of this study is companies in the basic materials sector listed on the Indonesia Stock Exchange in 2019-2023. The sampling method used is purposive sampling with samples from 8 companies for 5 years. The analysis technique used for the test is Eviews version 12.0 assisted panel data regression. The results of the study show that simultaneously corporate governance, risk management, and compliance (GRC), and profitability have an effect on the company's value. Based on partial testing, the variables of audit committee, managerial ownership, institutional ownership, independent board of commissioners, risk management, compliance and profitability do not affect company value.
