ABSTRACT

Time management is crucial for students, especially for those involved in various activities, including organizational activities. Telkom University students face challenges in managing large-scale events and ensuring efficiency. Student activism that involves participation in organizations and social activities also requires good time management. Strategies can help students balance their involvement in organizations with academic achievement. Many students face difficulties in managing their time which leads to delays in graduation. This project aims to provide a practical solution for students by creating a web-based application called "MonEv" to help organize and monitor event schedules. This application has event scheduling and event monitoring features that aim to help students avoid graduation delays, stay focused on coursework and stay active in their organizational activities.

Keywords: Time management, web-based application, university students.
