

ABSTRACT

Ambient lighting has an important role in creating a cozy and aesthetically pleasing space atmosphere in a sleeping room. Table lampshade, as a lighting element, not only functions as a light source but also contributes to the aesthetic value of the space. This study aims to analyze the effect of table lampshades that support ambient lighting with an aesthetic and functionality approach in the sleeping room. This research uses a mixed method with a user needs analysis approach. Data collection techniques were conducted through questionnaire surveys, interviews, and analysis of existing lampshade designs. The data obtained was analyzed to understand the relationship between the visual elements of the lamp with the atmosphere of the room and user preferences. The table lampshade design designed in this study aims to create ambient lighting that is comfortable, aesthetic, and in accordance with user needs.
