

ABSTRACT

Abstract : *The Ancient Bandung Lake was once a vast lake formed by the eruption of Mount Sunda thousands of years ago, which later evolved into the Bandung Basin. The lack of visual educational media about local geological history highlights the need for a new, engaging, and easy-to-understand approach. This study designs an educational illustration book titled "Nature Speaks: The Ancient Bandung Lake", aimed at introducing local geological history in a visually appealing way for readers aged 10 and above. The methods used include literature review, field observation, and interviews with geologists and the target audience. The resulting design features a cartoon and realistic illustration style, complete with a timeline and interesting facts to build a historical narrative and promote environmental awareness. This book is expected to serve as an alternative learning medium that connects geography, culture, and local identity in an enjoyable and informative way.*

Keywords: *Ancient bandung lake, informative, educative*
