

PREFACE

Alhamdulillah. With the help of Allah, the most gracious and merciful, the author has completed the final project, titled “Mental Health Topic Analysis Based on Clustering Algorithm: A Social Media Study.”. This research is a fruit of the hard work and passion of the author to pursue and fulfill the requirements of finishing the bachelor's degree in Information Systems at Telkom University’s Faculty of Industrial Engineering. The author is fully aware that every journey cannot be done alone, especially the final project, which requires dauntless perseverance and an invaluable amount of support, for which the author will be grateful and remember forever. There are several parties that the author wants to mention.

The first one is the author’s supervisor. The author is eternally grateful to Dita Pramesti, S.Si., M.Si., and Dr. Hanif Fakhurroja, S.Si., M.T., who always encouraged and tirelessly helped the author in succeeding with this final project from its inception. The second is the author’s only group member for this final project: Raihan Akbar Ramadhan, for his teamwork and endless brainstorming efforts that contributed significantly to the improvement of this final project. Furthermore, the author would also like to thank the class of SI-45-INT for its unforgettable moments and memories.

Last but not least, the author would like to extend a special thanks to the author’s parents, who have endlessly supported the author through ups and downs, always giving love and care. The author is fully aware of the imperfect nature of this final project and would like to apologize if there are any wrongdoings. The author hopes that this final project will serve as a source of inspiration for further research and is eternally grateful to everyone who contributed to the project’s completion.
