

ABSTRACT

DESIGN AND DEVELOPMENT OF THE INFORMATION SYSTEM DONATIONS AT ARTANITA AL-KHAIRIYAH ORPHANAGE USING EXTREME PROGRAMMING METHODS

By

Rizal Adiyaksa Abdul Malik

Artanita Al-Khairiyah Orphanage is an institution that accommodates children with social problems to get care, guidance, and education provided with various knowledge and skills, In its implementation, it often experiences financial limitations resulting in limitations in its operations, therefore, it requires support from donors who are willing to help them, but the distribution of Donations is still a manual method using a notebook, causing less than optimal efficiency in managing funds. In addition, the lack of dissemination of Donation information to support the financing of foster children to potential donors and the lack of information about the activities of foster children and the lack of transparency in the distribution of Donation results is also a problem that needs to be resolved. This research aims to design a Donation information system for Artanita Al-Khairiyah orphanage. With this website, information related to orphanages can be widely distributed and can be easily accessed by donors. Increase the level of transparency in the distribution of Donations and programs implemented so as to build trust from donors.
