

ABSTRACT

Walkair is state of the art Point to Multipoint (PMP) wireless system. The system, with innovative technology feature, provide data and voice service of fiber optic quality. Essential for high speed internet access and other data application. Small and Bussiness (SME) as well as office and recidental buildings (RTTO/RTTB) can benefit from high quality voice, high speed internet access and other data services.

WALKair1000 also serves as an efficient feeder to wireless cells. With this systems, new operator can enjoy a successful, quick and cost-effective penetration process into telecom market.

In this final project will be discussed about WALKair 1000 air performance. Analysis will consider of BER that background to receive signal on the customer.
