## ABSTRACTION

The development of world telecommunication has develop in an amazing improvement from the conventional telecommunication to the third generation which as combined the voice and data communication. This third generation is known as the third generation of communication or 3-G Communication.

As the new technology, CDMA2000 were improved and being standarized by the 3GPP2 (3<sup>rd</sup> Generation Partnership Project 2), and as other new technology being introduced to our country, CDMA 200 need a further acknowledgment from its works.

This Final project is being purpused as a deeper study about signalling aspect on CDMA 2000. The chosen media on this final project is a visualization program, describing signalling process on CDMA 2000, including call processing, mobility management and call feature.
