

## ABSTRACT

SMS(Short Messaging Service) is the must tool that used now, because its cost is cheap and its process is fast, to the point for destination. SMS is the feature from GSM that are development and standaritation ETSI, however have more feature from GSM, such as EMS, MMS, GPRS

SMS that are developed now, through canal signaling, with use GPRS, we can make application that access internet resource with bandwidth so, it can push its operational cost. Indosat M3 decided cost 20 rupiah to 1 Kbyte so, we can send SMS with cost 20 rupiah through GPRS is cheaper significant than SMS that usual, namely its cost is 350 rupiah for one SMS.

J2ME is a language programming that are used especially for HP and PDA to make interface to and build network with url through WAP and GPRS.

Servlet/JSP/PHP will undergoing SMS demand from user and send answer its process to SMS gateway.
