

ABSTRACT

This final project will be made an application that manage information in Kebajikan Center. Kebajikan Center is a community that needs an application to give information to all it's member, like information about members, ustadz and missionary (dakwah) consultation. The System Application of Kebajikan Center can manage and process data of the member and data of Cellular Al-Quran (tausiyah).

The target of this Application System is the administration operator where as the members are the users that can enjoy many kinds of it's application. The operator has duty to manage the database of the ustadz, members, registration members, and tausiyah info. While the management of the information on this application is used to fill the request of the info that needed by the members to consult about missionary (dakwah) via SMS (Short Message Service). Every member will be given an ID Card as the sign that has been registered as member in Kebajikan Center.

This application is made using **Borland Delphi 6** and using **Paradox** as it's database. To make the information easier to be informed to the user it's used feature (SMS Service) using handphone/cellular phone as the media (using SMS Gateway).
