

ABSTRACT

Recently, Korean culture is more happening in Indonesia. That brings big influence for Indonesian people. And as information technology develops, more system based on computer network need practical application on handphone like pocket dictionary.

In this Final Project, the writer has made pocket dictionary application on handphone based on *Android* operation system. This application is called *Korean Pocket*, an application that its function is as dictionary. But dictionary here is only pocket dictionary because the words are very limited. Where user knows the meaning, pronunciation, and Korean letter itself.

From the final result that I got, this application works well just like I expected, where user can understand Korean language easily on handphone based on *Android* operation system.

Keyword: pocket dictionary, Korean language, *Korean Pocket*, *Android*
