

ABSTRACT

Boarding house is a resource that cannot be removed from the lives of students, especially university students whose status as overseas. However, information about boarding house that can be booked for boarding must come directly from the website or clay boarding information. And so we need an information system that takes reservations and info automatically from the source website and then displayed on the Android-based phones.

Whats the reason to choose Android as a platform to make this aplication, this is due to the rampant use of mobile phones with the operating system. In the process of making this application to use Java-based programming for the Android platform, supported by the Android SDK and Eclipse as a development environment, in addition to Android also get full support from its owner, the Google making it easier for application developers to create Android applications.

The results of the Boarding House Reservation And Information Aplication Based on Android Operating System is to facilitate the boarding and boarding in a prospective buyer to get information about boarding house or can order it online. Thus this application can be useful for the community, prospective residents boarding, and the owner of the boarding-house.
