

ABSTRACT

Bandung Zoo is one of tourism object that is always crowded by domestic tourists from Bandung and its surrounding. The visitors' enthusiasm can be looked especially on Sunday or holiday. Besides, it can be used as recreation media, the zoo also can be used as an education media for whom want to know about animals world.

Considering Bandung Zoo's importance role for tourism, a computerised system which can support the zoo need to be built. The goal of this last project is to make a website as information provider from Bandung Zoo's official to citizens. A website is assumed as a good media to promote some products in information technology era.

This last project was implemented by using PHP for programming script. Software which is used for designing web is Macromedia Dreamweaver and Macromedia Flash. Software that is used for managing databases is MySQL, and MS Visio Professional is used for system modelling.
