

## ABSTRACT

Nowdays, technologi development makes someone easier to access information that easy to get, information that involve with educationneeded by student's parent. This is used to get education growth of their child, beside that in order to press the behavior of their student controlling them. The student maybe easy to their parents if they run away, and cheating the school fee that are given by their parents. In the case their parents will be asked to give handphone number when they receive the arrival report, because is student asked will give their parent's number maybe they don't give the true number or they say that their parents don't have phone number.

The final project with the title is Application of information service for student of SMAN 22 BANDUNG based on SMS that can give easy to parents and gives information to database that is avaiabled by the school such as present list, value, school fee and information to the student parents.

This application is set up using waterfall model, help utilities that used in this analis step are DFD, P spec, data dictionary, database structur and menu structure. The database application is built by mySQL and delphy as programming language.
