

Abstract

SMA Negeri 2 Nganjuk is one of favorite high schools in Nganjuk, a region in the province of East Java, which have already had accessible online information system for their students, teachers and staff, alumni, and other people who want to get further information about SMA Negeri 2 Nganjuk, e.g. its performances or achievements in certain periods of time.

By seeing the progress of technology and using the website of SMA Negeri 2 Nganjuk, this final project, entitled "Web-Based Online Examination and Scoring Application for SMA Negeri 2 Nganjuk", is made to help teachers in evaluating their students through daily quizzes and presenting the scores online along with the scores components.

The application itself will be built using PHP as the web application scripting, and MySQL as the database system. Moreover, Macromedia Flash and Dreamweaver will be used as programming editors. Apache Server will be the web server.
