ABSTRACT

Rental MATAHARI is a place to borrow movie in VCD/DVD that is located in Bojongsoang, Dayeuhkolot. Currently, manual system is used to handle the management of data in Rental MATAHARI, from entering data, transaction's cost counting, fine counting, to printing report, that is by hand writing. All of those activities are difficult and need hard work from the employee of Rental MATAHARI . Beside that, manual system needs high cost.

Because of those reasons, the existence of Rental MATAHARI Web Based Application will become an aid for the employee to manage the data in Rental MATAHARI. The functional of this web based application is: the management data of employee, member, movie, supplier, borrow transaction and return transaction, fine counting, also printing the report periodically.

This end project was built in structured analysis and design. My SQL is used for the database and PHP is used for the programming language.

Key words : Borrowing application for VCD/DVD, PHP, MySQL
