ABSTRACT

Desktop application is an application that available on the client computer, and controlled by the user. Computer is one of the electronic device that capable of performing many tasks and makes people addicted to using it. Computer has many functions that are utilized by humans, one that is as a means to work.

PT. Mustika Surya Citra is a company engaged in the selling-buying, trade-in car on cash and credit. This company has been using a desktop application that's used to handle sales and purchases order. However, a desktop application that is used is not fully able to handle all transactions that made by company.

Therefore, the final project, entitled Applications Selling-Buying Cars at Car Showroom PT. Surya Citra Mustika created to handle all transactions the company. This application is a desktop application, and with this application, all transactions that made by company can be handled by the application.

This final project is made by using java programming language, software Netbeans 6.91, which adapting all package inside and added with some libraries to create a form, making files, and to call the database. Moreover, this application uses software iReport-nb-0.9.1 for making report.
