ABSTRACT

New Students Acceptance Activities (PPDB) in SMP N 1 Gamping Sleman regularly every year. The activity aims to get students who qualified and had escaped the selection process undertaken by schools. SMP N 1 Gamping requires an application that can menagani data processing selection of new students quickly and efficiently, making it easier for personnel selection in doing data processing.

Implementation in the manufacturing of these applications using the programming language PHP Framework is more superior in terms of security and manufacturing applications. The database used is MySQL which is a database that is widely used by many people, so that makes it easy for schools to perform data processing.

This application can perform processing of data quickly and automatically so as to produce valid data. Application of this new management of learners can be accessed by whoever and wherever they are using the internet access. This application is expected to be a solution to provide convenience and comfort for the school and the community.

Keyword : PPDB, PHP Framework, MySql.
